

capture data from PDF tables

Upload a PDF, get back tabular CSV data.

- [Introducing Tabula](#)
 - [Tabula Demo Site](#)
 - [Tabula source code](#)
-

EDIT:

I just used this application with great success to convert the data from old instructor evaluations into csv form. It took some jury-rigging to get the output into the form that I wanted for this reason: Tabula only selects one table at a time, so if you want info from multiple tables on the same sheet, you need to do that yourself. I stitched my data together using R and it seems to be doing okay. Feel free to email me with questions: eitan.arom@gmail.com
