Has anyone tried Xerte Online Tookit?

Has anyone tried "Xerte Online Toolkit?"http://www.xerte.org.uk/ It's a tool for making it easy to create learning objects in either Flash or HTML. "Xerte allows authors with no programming skills to build elearning activities through a simple browser interface. Authors use a wizard to enter text, media and interactions into a range of template pages. There are nine types of interaction available including multiple choice, gap fill, open answer, hotspot and diagram labelling." –

Xerte – Maybe something you're looking for…

I'm wondering if it's worth installing on a server and testing it out. Any comments?
