

How do I convert a .docx file on a Mac OS X

By default, Office 2007 saves documents in a new XML format (.docx). Please follow the link below to download a widget that allows users to convert files straight from the MAC OS X desktop.

For best compatibility across versions of Microsoft Office, it is best to change the default file format to **NOT** save as Office XML.

Microsoft's official converter from pre-MacOffice 2008 versions is **Open XML File Format Converter for Mac** :
