

Message notification in Pidgin

Pidgin ships with a message notification plugin, but it is not enabled by default. To make the taskbar item flash when a new message comes in:

- Go to Tools → Plugins and check “Message Notification”.
- Select “Message Notification”. When the item is highlighted, click on “Configure Plugin” button
- Under “Notify For”, check all three boxes: “IM windows”, “Chat windows” and “Focused windows”. Leave “Only when someone says your username” unchecked.
- Also check “Flash window”.
- Under “Notification Methods”, check “Flash window”.
- Click on “Close” button.
