real-time collaborative text editors

Multiple people editing a document at the same time seems impossible, but now there are three different tools for doing that.

- EtherPad
  - EtherPad: Real-time Editing with JavaScript
  - Comparison of SubEthaEdit and EtherPad
- Google Docs – "allows simultaneous editing that's not in real time. Rather, each save pushes a copy to other active editors, but you can't see each other type or delete." – from Comparison of EtherPad and SubEthaEdit.
- SubEthaEdit

Please add comments here:

- TextFlow – A different take on collaborative editing

- http://log.emonk.net/post/213952350/collaboration-is-not-communication

- I switched to a Mac partly to use SubEthaEdit, then didn't need it enough to buy it. Didn't know Google Docs could do this, but EtherPad, which I just heard about, seems easy enough to show and use right away in a meeting. Check out the 90 second EtherPad video. – *Mike Franks 11-19-08*
