

Repack Adobe Reader for fast install?

Want to repack the adobe reader exe into an MSI for faster deployment?

1. Downloaded the full file AdbeRdr70_enu_full.exe, unchecked the boxes Yahoo toolbar and Photoshop Album 2.0.
2. Run the file AdbeRdr70_enu_full.exe and after the file had been extracted in PROGRAMFILES\FOLDER\Adobe\Acrobat 7.0\Setup Files\RdrBig\ENU, i Copied the files to another location and canceled the installation (c:\ar7\iso)
3. Create a Administrative installation by running `msiexec /A "c:\ar7\iso\Adobe Reader 7.0.msi"` then is ask where to put the files, I choosed c:\ar7\Repack.
4. Now you can create a mst file to modify your package, What I did that can be useful is on the Component EULA_Accept_Registry_R removed the condition `EULA_ACCEPT="YES"`

tada...
