

Good sources of information on Moodle

- go to <http://moodle.org> and register to get a login ID. No charge. That will get you into some of the links below.
 - once you've logged in, edit your profile, at least to say that you're at UCLA, which dept. and what systems you're familiar with.
 - go to [Free Support](#) link on Moodle Main Page and click on [Resources](#) and look through the sample sites, etc.
- Also look at Glossaries.
- go back to [Free Support](#) link on Moodle Main Page and click on [Forums](#) and look through the long list and see what interests you. Then go in to the ones that interest you and click [Subscribe to This Forum](#) near the top right. That will send you email whenever anyone posts there. You can change it to Digest format if you want to have fewer emails.
- when you find a posting that sounds knowledgeable, click on the name and read the profile to see where they're coming from. You can also see their other postings.
- Search the Forums, as well as browse them. And then feel free to post a question if you want.
- <https://kb.ucla.edu/link/879>
- <https://kb.ucla.edu/link/766>
- Also, look at our [Knowledgebase Moodle Unanswered](#) and [Moodle Answered](#) questions and see what you want to add, or can answer.
- There is also a Bug Tracker (Jira, like Sakai) <http://tracker.moodle.org/secure/Dashboard.jspa>
- And a [PHP Programmer's Cross Reference](#) of the latest version.
