

In Moodle, how do we direct people to hidden sites?

Please answer this if you can, and then retag it. Thanks

To clarify the question, if we make the site “not available to students” then it’s not going to show up on the list of available sites, or sites that can be enrolled in. Is there any way to let the people we want subscribe to it know where it is? (Give URL with Enrolment key?)

In Moodle 1.6 there is no way to allow a student to view a course that is hidden. I tried to override the “View hidden courses” permission in Moodle 1.7 for a specific course and that didn’t work. I would think that it should.

In both cases if you have the student has the url they still will not able to access the site. They will be notified that the course is not currently available to students.
