

Identifying phishing in your e-mail

For information about phishing, what to do, and examples of past email phishing attempts in UCLA email, consult the [IT Services "Phishing Scams" web page](#)

If you receive a phishing email, IT Services' Security team asks that you share it with them. Email a saved copy of the original message to security@ucla.edu so they can put an image of the original contents in their phishing repository. This will generate a ticket and an InfoSec Analyst will get it posted to the website.

Revision #4
