How do I print from Firefox?

Printing a Page

To print the current page:

- Select File > Print.

To print selected text:

- Select the text in the current page.

- Select File > Print. The print dialog
  box will appear.

- Under Print Range, click Selection.

The web page's author and the size of the printed page, not the size of the
onscreen window, determine placement of content on the printed page. Text is
wrapped and graphics are repositioned to accommodate paper size.
