

# Burn DVD from VIDEO\_TS folder (Mac OS X)

To burn a UDF DVD that plays in standalone DVD players, fire up Terminal and type the following:

```
|hdiutil makehybrid -udf -udf-volume-name <dvd_text> -o <dvd_name>.iso <path/to/folder>|
```

The dvd\_text will be the disc's title. Make sure to use the path points to the parent folder where VIDEO\_TS resides.

The resulting ISO can be burn to disc by Disk Utility.
