

Why can't I play ram files on my mac

If you are a Mac user and you are having difficulties playing the videos posted on this site, please do the following steps:

1. Make sure you have a version of Real Player installed (you might want to look to install Version 10.0.0 or higher).
2. Open up a Safari web browser and navigate to the page where the videos are posted.
3. Hover over one of the links to the videos and hold down the ctrl button and click on your mouse.
4. A box should pop up next to your mouse, select the option "Save Linked File to the Desktop" (or "Download Linked file" - this just depends on what version of Safari you're running).
5. Go to your Desktop and click on the .ram file that was just saved to your desktop.

Another solution is to download an older version of Real Player, I'd recommend Real Player Version 10.0.0, which you can download here: <http://forms.real.com/real/player/blackjack.html>
