csh and single quotes

In csh, using quotes in a quoted string can be tricky, especially if the string contains both single and double quotes. If you use single quotes to quote the string, use ‘\’’ (a single quote, a backslash followed by two single quotes) where you want to insert a single quote:

```
% echo 'testing'testing% echo 'test'ing'Unmatched '.% echo 'test\'ing'Unmatched '.% echo 'test\\
```
