

# html entity conversion website

If you've ever inadvertently pasted a block of html into a GUI text editor and ended up with a set of html encoded greater than signs and other unreadable codes, this website helps you quickly convert back.

<http://htmlentities.net/>

Here's an example:

```
&lt;/strong&gt;
&lt;/p&gt;&#010;&lt;p&gt;&lt;strong&gt;&lt;i&gt;Participati
on: &lt;/i&gt;&lt;/strong&gt;You are expected to complete ...
```

Decodes to:

```
</strong> </p>&#010;<p><strong><i>Participation: </i></strong>You are expected to complete ...
```
