

# What characters can go into a valid HTTP URL?

Section 5 of [RFC 1738 - Uniform Resource Locators](#) specifies the format of an HTTP URL:

```
httpurl = "http://" hostport [ "/" hpath [ "?" search ] ][definition of hostport omitted]h
```

The “path” and the “query string” parts can contain alphabets, numbers the following characters:  
\$-\_.+!\*'(),;:@&=/

They can also contain escaped forms (“%” (percent) followed by 2 hex values, i.e. %[A-Fa-f0-9]{2}, for each byte) of other characters.
