

# Why can't I add a photo using AT Photo in Plone?

If you've used the product [ATPhoto](#) or [ATPhoto Album](#) in Plone 2.1, but now it is breaking in Plone 2.5, before you rip your hair out, here's what you need to do:

1. copy the code from this site:  
<http://dev.plone.org/collective/browser/ATPhoto/trunk/configure.zcml> (you might need to clean it up a bit)
2. log into your server and go to your Zope folder
3. next go to `/instance-home/Products/ATPhoto/configure.zcml` (you might want to make a backup of this file)
4. remove the existing code and replace it with the one you've copied
5. restart Zope (you can do this via ZMI)

And volia! It's fixed.
