

OASIS shortcut for Host Explorer 15

By default, Host Explorer 15 does not automatically start OASIS like in Host Explorer 9. If your only reason to connect to zos.ais.ucla.edu is for OASIS access, you can save a step by creating a keystroke script in Host Explorer.

Create a new quick script to run when starting Host Explorer

Open Connection Central

Quick Scripts > Open any one of the existing scripts

File > New

Select Quick Script type: 3270

Commands > Send keystrokes

Enter **oasis**

Click OK

Repeat, and from Category, select Action Keys

Select Enter and click Insert. Click OK

The script should now look like:

Send keystrokes: oasis, 0

Send keystrokes: [Enter], 0

Save the quick script as something like "oasis auto start"

Go to your zos.ais.ucla.edu connection

Open Properties

Connection > Other

For Auto start Quick-Key/Quick Script/Macro, browse and select the script you created

Click OK

Hope this helps. (Credit to the SSC Support staff).
