

Second Life on CLICC computers

To use Second Life on CLICC PC desktops, CLICC recommends the following:

On your own computer or a computer on which you are at least a local administrator, please do the following:

Download Second Life(SL) zipped files to an external drive such as USB flash drive (minimum 1 GB available space).

Unzip the files and run the install to the USB flash drive, not the computer.

If you are already on a CLICC Computer, please note that only the CLICC Classroom Coordinator can perform the above steps for you.

Following the install, a folder entitled 'Second Life' will be created on the USB flash drive which will contain an .exe file for launching SL.

Copy the above folder to the CLICC computer's W:\ drive or Workspace.

NetSupport School Tutor on the classroom instructor station may be used to push the folder out to the classroom computer's W:\ drive.

Once the folder is copied to the CLICC computer, browse to the folder, find the .exe and launch SL.
